PRESS RELEASE

Serendipity Veripress 9.1 announced

SYDNEY, Australia – September 5th, 2024 – Serendipity Software today announced version 9.1 of Veripress, a major update to the software that includes many new features and enhancements of benefit to new and existing customers alike.

"Veripress version 9.1 introduces a dongle-free licensing option for new purchases allowing it to run in the cloud" said Peter Skarpetis, Serendipity Software's Chief Executive Officer.

Veripress version 9.1 adds support for proofing TIFF, PSD and PDF files containing RGB images with spot colours using a purely RGB workflow. This ground-breaking feature preserves the expanded colour gamut and dynamic range of photographic design elements, while maintaining the accuracy of individually handled spot colour channels.

Veripress version 9.1 uses the latest hashing algorithms for storing user passwords, improving overall account security.

Veripress version 9.1 now runs on Linux systems with FIPS mode activated, ensuring it operates in the most secure environments.

For more information on the new features and enhancements in Serendipity Veripress 9.1 see the release notes, available on the [Serendipity Software website](https://www.serendipity-software.com.au).
